# Select a CompactLogix System

# CompactLogix Controllers Overview

The CompactLogix system is designed to provide a Logix solution for small and mid-size applications. Typically, these applications are machine-level control applications. A simple system can consist of a standalone controller with one bank of I/O modules and DeviceNet communication. In a more complex system, add other networks, motion control, and safety control. As part of the Integrated Architecture® system, the CompactLogix controllers use the same programming software, network protocol, and information capabilities as all LOGIX 5000™ controllers. This system provides a common development environment for all control disciplines.

## CompactLogix 5380 Controllers Overview

The CompactLogix 5380 controllers are the first Logix controllers to offer configurable EtherNet/IP modes, that is, Dual-IP mode or Linear/DLR mode. With CompactLogix 5380 controller firmware revision 29.011 or later, you can configure the embedded Ethernet ports to connect to separate networks, an enterprise-level Ethernet network, and a device-level network. When the controller operates in Dual-IP mode, each port requires its own network configuration.

The CompactLogix 5380 controllers deliver scalable control that is ideal for applications from small standalone equipment to high-performance indexing tables, process skids, case packers and erectors, and packaging. The CompactLogix 5380 controllers also provide a truly integrated motion solution.

### Example CompactLogix 5380 System on an EtherNet/IP Network

## CompactLogix 5370 Controllers Overview

Consider the following:

- The CompactLogix 5370 L3 controllers deliver scalable, affordable control ideal for applications from small standalone equipment to high-performance indexing tables, process skids, case packers and erectors, and packaging. The CompactLogix 5370 L3 controllers also provide a truly integrated motion solution.
- The CompactLogix 5370 L2 controllers combine the power of the Logix architecture with the flexibility of 1769 Compact I/O modules. From small standalone equipment to higher performance applications, these controllers are ideal for assembly machines, hoisting systems, process skids, indexing tables, and packaging.
- The CompactLogix 5370 L1 controllers combine the power of the Logix architecture with the flexibility of 1734 POINT I/O modules. Ideal for small to mid-size machines, these controllers offer value to customers who need the benefits of an Integrated Architecture® system in a lower-cost system.

### CompactLogix 5370 System on an EtherNet/IP Network

The CompactLogix 5370 L2 and L3 controllers support DeviceNet connectivity.

## Compact GuardLogix 5370 Controllers Overview

The Compact GuardLogix 5370 controller provides safety control at SIL CL3 according to EN62061 / EN 61511-1 / IEC 61508 and PLe according to EN ISO 13849-1.

## Armor CompactLogix and Armor Compact GuardLogix Controllers Overview

On-Machine™ standard and safety controllers support the same temperature range of CompactLogix controllers. These controllers also offer global certifications and ratings and Ingress Protection (IP67) for dust and wash-down protection for immersion between 15 cm...1 m (5.91...393.70 in.) in harsher environments.

# CompactLogix Controllers

The CompactLogix platform brings together the benefits of a common programming environment, common networks, and common control engine in a small footprint with high performance. Combined with 1769 Compact I/O or COMPACT 5000 I/O modules, the CompactLogix platform is perfect for tackling smaller, machine-level control applications, with or without simple motion, with unprecedented power and scalability. A CompactLogix platform is ideal for systems that require standalone and system-connected control over EtherNet/IP, ControlNet, or DeviceNet networks.

(1) CompactLogix 5380 controllers support Dual-IP mode and DLR/Linear mode. Mode use is user-configurable.

(2) CompactLogix 5370 controllers have two EtherNet/IP ports to connect to an EtherNet/IP network. The ports carry the same network traffic as part of the embedded switch of the controller. The controller uses only one IP address.

## CompactLogix 5380 Controllers

In a CompactLogix 5380 controller system, COMPACT 5000 I/O modules are installed to the right of the controller as local I/O modules. As many as 31 modules can be installed in the system. The CompactLogix 5380 controllers come with:

- Dual embedded EtherNet/IP ports for use in star, linear, and DLR EtherNet/IP network topologies
- USB port for firmware updates and programming
- Support for Dual-IP mode.

Energy Depletion characteristics for the 5069-L310ER-NSE controller.

The residual stored energy of the 5069-L310ER-NSE controller depletes to 20 µJ or less in 2 minutes with 0...32V DC of SA power applied. The 5069-L310ER-NSE controller does not maintain the real-time clock on power cycle.

**IMPORTANT** You can use the 5069-L310ER-NSE controller with DC Sensor Actuator (SA) power only.

For more information, see the Rockwell Automation® Knowledgebase article #942580, '5380 CompactLogix controllers limited to 16 local 5069 modules in V29 of Studio 5000.' The document is available at <http://www.rockwellautomation.com/knowledgebase>.

With the Logix Designer application, version 30.00.00 or later, the controller supports as many as 31 local I/O modules.

## CompactLogix 5370 L1 Controllers with Embedded I/O

The CompactLogix 5370 L1 controller comes with:

- A built-in, 24V DC isolated<sup>(1)</sup> Power Supply module.<sup>(2)</sup>
- Dual EtherNet/IP ports for linear and ring topologies.
- USB port for firmware updates and programming.
- Embedded digital I/O (16 DC inputs, 16 DC outputs).
- Support for 1734 POINT I/O.

## CompactLogix 5370 L2 Controllers with Embedded I/O

The CompactLogix 5370 L2 controller comes with:

- A built-in, 24V DC Power Supply module.
- Dual EtherNet/IP ports for linear and ring topologies.
- USB port for firmware updates and programming.
- A combination of embedded digital, analog, and high-speed counter I/O.

## CompactLogix 5370 L3 Controllers

In a CompactLogix 5370 L3 controller system, the 1769 Compact I/O modules can be placed to the left and the right of the power supply. As many as eight modules can be placed on each side of the power supply. The CompactLogix 5370 L3 controller comes with:

- Dual EtherNet/IP ports for linear and ring topologies.
- USB port for firmware updates and programming.
- Support for 1769 Compact I/O.

Use the 1769-L30ER-NSE controller for mining applications. You can deplete the residual stored energy of the 1769-L30ER-NSE controller to 200 µJ or less before you transport it into or out of a mine. The 1769-L30ER-NSE controller does not maintain the real-time clock on power cycle.

1769-L33ERM	1769-L35E	
1769-L36ERM	Any previous 1769-L3x controller	

(1) IMPORTANT: Typically, you can use any of the new controllers that are listed in each row as replacements for any of the previous controllers that are listed in the corresponding cell to the right. For example, you can replace a 1769-L32E controller with a 1769-L30ER, 1769-L30ERM, or 1769-L30ER-NSE controller.

In some rare cases, system configuration helps to prevent controller replacement as shown in the previous table. For example, if your system uses a 1769-L32E controller with 12 expansion modules, you cannot replace that controller with a 1769-L30ER, 1769-L30ERM, or 1769-L30ER-NSE controller. Those controllers support no more than 8 expansion modules. You must replace the 1769-L32E controller with a 1769-L33ER, 1769-L33ERM, or 1769-L36ERM controller.

We recommend that before you upgrade your controllers, consider your application requirements to verify that the replacements that are listed previously apply.

(2) Requires converting from ControlNet connections to EtherNet/IP connections.

## Compact GuardLogix 5370 Controllers

In a Compact GuardLogix 5370 controller system, the 1769 Compact I/O modules can be placed to the left and the right of the power supply. As many as eight modules can be placed on each side of the power supply. The CompactLogix 5370 L3S controller comes with:

- Dual EtherNet/IP ports for ring and linear topologies.
- USB port for firmware updates and programming.
- Safety control to achieve SIL 3/PLe according to ISO 13849.

## Armor CompactLogix and Armor Compact GuardLogix Controllers

You can connect 1732 ArmorBlock or 1738 ArmorPoint I/O modules to the controller via EtherNet/IP in an Armor CompactLogix or Armor Compact GuardLogix controller system. The controller comes with:

- An IP67-rated enclosure
- A built-in, 24V DC Power Supply module
- An SD card slot
- Connection to On-Machine I/O
- Dual EtherNet/IP ports for ring topologies
- USB port for firmware updates and programming

## Controller Memory Use

**IMPORTANT** This section does not apply to CompactLogix 5380 controllers.

These equations provide an estimate of the memory that is needed for a CompactLogix controller. These numbers are rough estimates.

Controller Tasks	* 4000	=	bytes (minimum 1 task)
Digital I/O points	* 400	=	bytes
Analog I/O points	* 2600	=	bytes
DeviceNet modules <sup>(1)</sup>	* 7400	=	bytes
Other communication modules <sup>(2)</sup>	* 2000	=	bytes
Motion axes	* 8000	=	bytes
FactoryTalk® alarm instruction	* 1000	=	bytes (per alarm)
FactoryTalk subscriber	* 10000	=	bytes

(1) The first DeviceNet module is 7400 bytes. Additional DeviceNet modules are 5800 bytes each.

(2) Count the communication modules in the system, not just those modules in the local chassis. This total includes device connection modules, adapters, and ports on PanelView terminals.

Reserve 20...30% of the controller memory for future expansion.<sup>(1)</sup>

(1) This requirement does not apply to CompactLogix 5380 controllers.

# CompactLogix Communication Options

You can configure your system for information exchange between a range of devices and computing platforms and operating systems. Select a CompactLogix controller with integrated communication or the appropriate communication module.

## EtherNet/IP Communication Options

The Ethernet Industrial network protocol (EtherNet/IP) is an open industrial-networking standard that supports real time I/O messaging and message exchange. The EtherNet/IP network uses off-the-shelf Ethernet communication chips and physical media.

Dual-port EtherNet/IP support embeds switch technology directly in the controller, so the controller can operate on star, linear, or ring EtherNet/IP topologies.

- (1) Network performance in a CompactLogix 5380 system is optimal if the 1 Gbps network communication rate is used. However, many Ethernet devices do not support the 1 Gbps network communication rate. You must consider how the different maximum network communication rates impact your CompactLogix 5380 control system when you design the system.
- (2) The number of nodes that are listed for CompactLogix 5370 and CompactLogix 5380 controllers represents the maximum number of EtherNet/IP nodes you can include in a controller project. For example, in a controller project that uses a 1769-L18ERM-BB1B controller, you can add as many as eight EtherNet/IP nodes to the project.

## CompactLogix 5380 Controllers EtherNet/IP Modes

The CompactLogix 5380 controllers are the first Logix controllers to offer multiple EtherNet/IP modes. With CompactLogix 5380 controller firmware revision 29.011 or later, you can use Dual-IP mode or Linear/DLR mode.

### Dual-IP Mode

Dual-IP mode lets you configure the controller embedded Ethernet ports to connect to separate EtherNet/IP networks, that is, an enterprise-level network and a device-level network. In this mode, each port requires its own network configurations that include some restrictions. For example, when you set IP addresses in Dual-IP mode, you cannot overlap IP addresses between the ports.

## Linear/DLR Mode

When CompactLogix 5380 controllers operate in Linear/DLR mode, they connect to only one network. That is, there is only one network configuration. When used in Linear/DLR mode, CompactLogix 5380 controllers can connect to any EtherNet/IP network topology—linear, DLR, or star.

For more information on EtherNet/IP modes with a CompactLogix 5380 controller, see the following:

- CompactLogix 5380 Controllers User Manual, publication [5069-UM001](#)
- CompactLogix 5380 Controllers Specifications Technical Data, publication [5069-TD002](#)

## DeviceNet Communication Options

The DeviceNet network is an open, low-level network that provides connections between simple industrial devices (such as sensors and actuators) and higher-level devices (such as controllers and computers).

Cat. No.	Description	Communication Rate	Number of Nodes
1769-SDN	1769 Compact I/O DeviceNet scanner	125 Kbps (500 m, max) 250 Kbps (250 m, max) 500 Kbps (100 m, max)	64
1769-ADN	1769 Compact I/O DeviceNet adapter		

## Serial Communication Options

These CompactLogix controllers support serial communication.

Cat. No.	Serial Options

## Modbus Support

To access a Modbus TCP network, connect through the embedded Ethernet port of the CompactLogix 5370 or CompactLogix 5380 controllers and execute a ladder-logic routine. For more information, see Knowledgebase document 470365 at <http://www.rockwellautomation.com/knowledgebase/>.

To access a Modbus RTU network, connect through a 1769-SM2 module, or Encompass™ partner, ProSoft ModuBus module, or Gateway and execute a ladder-logic routine. For more information, see Using Logix5000™ Controllers as Masters or Slaves on Modbus Application Solution publication [CIG-AP129](#).

# CompactLogix Integrated Motion

The Logix architecture supports motion control components that work in a wide variety of machine architectures.

- Integrated motion on EtherNet/IP supports a connection to Ethernet drives.
- The Kinetix® integrated-motion solution uses a SERCOS interface module to perform multi-axis, synchronized motion.
- Logix integrated motion supports the analog family of servo modules for controlling drives/actuators.
- Networked motion lets you connect via the DeviceNet network to one axis drive to perform point-to-point indexing.
- Not all CompactLogix 5370 and CompactLogix 5380 controllers support Integration motion on EtherNet/IP.
- All CompactLogix 5380 controllers support single-axis motor control with PowerFlex variable frequency drives over an EtherNet/IP network. This functionality is available on CompactLogix 5380 controllers that do not support other aspects of Integrated Motion over an EtherNet/IP network.

# Compact GuardLogix Integrated Safety

The Compact GuardLogix controller provides safety control to achieve SIL 3/PLe according to ISO 13849. A major benefit of this system is that it is still one project, safety, and standard together.

Application	Description
SIL 1, 2, 3	<p>The Compact GuardLogix controller system is type-approved and certified for use in safety applications up to and including SIL 3 according to IEC 61508, and applications up to and including PLe/Cat.4 according to ISO 13849-1. For more information, see:</p> <ul style="list-style-type: none"><li>GuardLogix Controllers User Manual, publication <a href="#">1769-UM022</a>.</li><li>GuardLogix 5570 and Compact GuardLogix 5370 Controller Safety Systems Safety Reference Manual, publication <a href="#">1756-RM099</a>.</li><li>GuardLogix Safety Application Instruction Set Reference Manual, publication <a href="#">1756-RM095</a>.</li></ul> <p>For more information on safety application requirements for 1768 Compact GuardLogix controllers, see:</p> <ul style="list-style-type: none"><li>Compact GuardLogix Controllers User Manual, publication <a href="#">1768-UM002</a>.</li><li>GuardLogix Controller Systems Safety Reference Manual, publication <a href="#">1756-RM093</a>.</li></ul>

During development, safety and standard have the same rules, multiple programmers, online editing, and forcing are all possible. Once the project is tested and ready for final validation, you apply the safety application signature and safety-lock the application to set the safety task to a SIL 3 integrity level. The GuardLogix controller enforces the SIL 3 integrity level. When safety memory is locked and protected, the safety logic cannot be modified and all safety functions operate with SIL 3 integrity. On the standard side of the GuardLogix controller, all functions operate like a regular Logix controller. Thus online editing, forcing, and other activities are all possible.

With this level of integration, standard logic and external devices, like HMI or other controllers, can read safety memory, avoiding the need to condition safety memory for use elsewhere. The result is easy system-wide integration and the ability to display safety status on displays or marquees. Use Guard I/O™ modules for field device connectivity. For safety interlocking between GuardLogix controllers, use Ethernet or ControlNet networks. Multiple GuardLogix controllers can share safety data for zone to zone interlocking, or one GuardLogix controller can use remote distributed safety I/O between cells/areas.

The Compact GuardLogix controller has these safety-related features and the standard features of a CompactLogix controller.

# Armor CompactLogix and Armor Compact GuardLogix Integrated Safety

The Armor CompactLogix and Armor Compact GuardLogix controllers extend the features of the CompactLogix 5370 and Compact GuardLogix 5370 controllers to On-Machine space. The Armor Compact GuardLogix controllers deliver integrated safety control up to and including SIL 3, according to IEC 61508 and PlE/CAT. 4, according to ISO 13849-1.

Application	Description
SIL 1, 2, 3	The Compact GuardLogix controller system is type-approved and certified for use in safety applications up to and including SIL 3 according to IEC 61508, and applications up to and including PlE/Cat.4 according to ISO 13849-1. For more information, see: <ul style="list-style-type: none"><li>• GuardLogix Controllers User Manual, publication <a href="#">1769-UM022</a>.</li><li>• GuardLogix 5570 and Compact GuardLogix 5370 Controller Safety Systems Safety Reference Manual, publication <a href="#">1756-RM09</a>.</li><li>• Compact GuardLogix Controllers User Manual, publication <a href="#">1768-UM002</a>.</li><li>• GuardLogix Safety Application Instruction Set Reference Manual, publication <a href="#">1756-RM095</a>.</li></ul>

During development, safety and standard have the same rules, multiple programmers, online editing, and forcing are all possible. Once the project is tested and ready for final validation, you apply the safety application signature and safety-lock the application to set the safety task to a SIL 3 integrity level. The Armor Compact GuardLogix controller enforces the SIL 3 integrity level. When safety memory is locked and protected, the safety logic cannot be modified and all safety functions operate with SIL 3 integrity. On the standard side of the Armor Compact GuardLogix controller, all functions operate like a regular Logix controller. Thus online editing, forcing, and other activities are all possible.

With this level of integration, standard logic and external devices, like HMIs or other controllers, can read safety memory, avoiding the need to condition safety memory for use elsewhere. The result is easy system-wide integration and the ability to display safety status on displays or marquees. Use Guard I/O™ modules for field device connectivity. ## COMPACT 5000 I/O Modules

You can install COMPACT 5000 I/O modules as local I/O modules in a CompactLogix 5380 control system.

You cannot use COMPACT 5000 I/O modules with the other CompactLogix controllers.

The COMPACT 5000 I/O architecture provides a wide range of input and output modules to span many applications, from high-speed digital to process control. The architecture uses Producer/Consumer technology that allows input information and output status to be shared among multiple LOGIX 5000 controllers.

The COMPACT 5000 I/O modules are installed to the right of a CompactLogix 5380 controller and require a separately sold removable terminal block (RTB) to connect field-side wiring.

The modules draw system-side power, which is known as Module (MOD) power, and field-side power, which is known as Sensor Actuator (SA) power from the system backplane as needed. The modules then pass the remaining power to the next module in the system.

## COMPACT 5000 DC Digital I/O Modules

Cat. No.	Inputs/Outputs	Voltage Category	MOD Current, Max	SA Power Current, Max
5069-IB16	16 inputs, sink	24V DC	75 mA	200 mA
5069-IB16F				
5069-IB6F-3W	6 inputs, sink			150 mA per channel 900 mA module
5069-OB16	16 outputs, source			Local Actuator (LA) Power Current <sup>(1)</sup> 0.5 A per channel 8 A module
5069-OB16F				
5069-OB8	8 outputs (2 groups of 4)			LA Power Current <sup>(1)</sup> 2 A per channel 8 A per group 16 A per module

(1) The module does not draw current from the SA power bus that is internal to the system. Local Actuator (LA+ and LA-) connections are used to supply field-side power to the module.

## COMPACT 5000 I/O End Caps

The right-most COMPACT 5000 I/O module in a CompactLogix 5380 control system requires an end cap. The end cap catalog number is 5069-ECR. An end cap ships with the CompactLogix 5380 controllers and COMPACT 5000 I/O EtherNet/IP adapters. You do not need to order one separately. However, you can order replacement 5069-ECR end caps.

## Removable Terminal Kits

You can order removable terminal kits with the CompactLogix 5380 controllers and 5069-FPD module separately. The kits are used to connect wiring to the controllers. The following table describes the kits.

The kits contain 1 RTB. Make sure that you order enough to meet your application needs.

Cat. Nos.	Device Supported	Description
5069-RTB14CJC-SCREW	COMPACT 5000 I/O module	14-pin screw type terminal block with embedded CJC thermistors
5069-RTB14CJC-SPRING		14-pin spring type terminal block with embedded CJC thermistors
5069-RTB18-SCREW		18-pin screw type terminal block
5069-RTB18-SPRING		18-pin spring type terminal block
5069-RTB6-SCREW	5069-FPD module	6-pin screw type terminal block
5069-RTB6-SPRING		6-pin spring type terminal block
5069-RTB64-SCREW	CompactLogix 5380 controllers 5069-AEN2TR EtherNet/IP adapter	4 and 6-pin screw type terminal block
5069-RTB64-SPRING		4 and 6-pin spring type terminal block
5069-RTB5-SCREW	5069-AENTR EtherNet/IP adapter	5-pin screw type terminal block
5069-RTB5-SPRING		5-pin spring type terminal block

## 1734 POINT I/O Modules

Additional 1734 POINT I/O modules can be installed on a CompactLogix 5370 L1 controller. The POINT I/O family is ideal for applications where flexibility and low cost of ownership are key for successful control system design and operation.

An RTB provides the wiring and terminations for field-side connections, and system power for the backplane.

## 1734 Communication and Specialty Modules

Cat. No.	Description	Wiring Base	POINTBus Current	
1734-AENT	The single port adapter connects POINT I/O modules to the Ethernet network.	—	—	
1734-AENTR	The adapter connects POINT I/O modules to a linear or DLR network and uses two copper network ports to connect to the network.	—	—	
1734-232ASC	The 1734-232ASC and 1734-485ASC serial interface modules offer a serial-link communication interface solution for peripheral products with RS-232 (only 1734-232ASC), RS-485, and RS-422 ports (only 1734-485ASC.)	1734-TB, 1734-TBS, 1734-TOP, 1734-TOPS	75 mA	
1734-485ASC			75 mA	
1734-ARM	The 1734-ARM address reserve module reserves the address and slot numbers to maintain a numbering scheme of a system. The 1734-ARM has no module configuration and does not communicate I/O data.		75 mA	
1734-CTM	The common terminal module (1734-CTM) and voltage terminal module (1734-VTM) expand the termination capabilities of POINT I/O modules. Install the modules to support higher density (8 channel) POINT I/O modules.		75 mA	
1734-VTM			110 mA	
1734-SSI	The 1734-SSI module collects serial data from absolute-position, encoding sensors that use standard serial synchronous interface (SSI) protocol.			

## 1769 Compact I/O Modules

The 1769 Compact I/O modules can be used as local I/O modules with these controllers:

- CompactLogix 5370 L2 controllers
- CompactLogix 5370 L3 controllers
- Compact GuardLogix 5370 controllers
- 1768 CompactLogix controllers

The modules mechanically lock together with a tongue-and-groove design and have an integrated communication bus that is connected from module to module by a moveable bus connector.

Each I/O module includes a built-in removable terminal block with fingersafe cover for connections to I/O sensors and actuators. The terminal block is behind a door at the front of the module. I/O wiring can be routed from beneath the module to the I/O terminals.

For detailed specifications, see 1769 Compact I/O Modules Specifications Technical Data, publication [1769-TD006](#).

### Power Supply Distance Ratings

Check the specification table of each module for the power supply distance rating. This rating indicates how many slot positions the module can be from the power supply.

(1) To reduce the effects of electrical noise, install the 1769-IT6 module at least two slots away from the AC power supplies.

## 1769 Communication and Specialty Modules

Cat. No.	Description	Backplane Current	Power Supply Distance Rating
1769-AENTR	The adapter connects 1769 Compact I/O modules to a linear or DLR network and uses two copper network ports to connect to the network.	500 mA @ 5V	5
1769-ARM	Use a 1769-ARM address reserve module to reserve module slots. After creating an I/O configuration and user program, you can remove and replace any I/O module in the system with a 1769-ARM module. You must first unplug the removed module in the Logix Designer application.	60 mA @ 5.1V	8
1769-ASCII	The 1769-ASCII module, a general-purpose two-channel ASCII interface, provides a flexible network interface to a wide variety of RS-232, RS-485, and RS-422 ASCII devices. The module provides the communication connections to the ASCII device.	425 mA @ 5.1V	4
1769-BOOLEAN	Use the 1769-BOOLEAN module in applications that require repeatability, such as material handling and packaging, when there is a requirement to activate an output that is based on the transition of an input. If the Boolean expression is true, the output is directed to the ON state. If the Boolean expression is false, the output channel is directed to the OFF state. There are four operators that you can configure as OR, AND, XOR, or none.	220 mA @ 5.1V	8

Cat. No.	Description	Backplane Current	Power Supply Distance Rating
1769-HSC	Use the 1769-HSC when you need: <ul style="list-style-type: none"><li>• A counter module that can react to high-speed input signals.</li><li>• To generate rate and time-between-pulses (pulse interval) data.</li><li>• As many as two channels of quadrature or four channels of pulse/count inputs.</li></ul>	245 mA @ 5.1V	4
1769-SM1	The Compact I/O to DPI™ or SCANport™ module connects to PowerFlex 7-class drives, other DPI-based host devices, and SCANport-based host devices such as 1305 and 1336 PLUS™ II drives.	280 mA @ 5.1V	6
1769-SM2	The Compact I/O to DSI/Modbus module connects to PowerFlex 4-class drives and to other Modbus RTU slave devices, such as PowerFlex 7-class drives with 20-COMM-H RS-485 HVAC adapters.	350 mA @ 5.1V	4

## 1769 Expansion Cables

If you divide 1769 modules into multiple banks, make sure:

- Each bank needs its own power supply.
- To use expansion cables to connect the banks.
- The last I/O bank requires an end cap.

How you orient I/O banks determines the expansion cables that you must connect the I/O banks.

If you add a	And connect the chassis	Use this cable <sup>(1)</sup>
Second bank	Right to left	1769-CRLx
	Right to right	1769-CRRx
Third bank	Right to left	1769-CRLx
	Right to right	1769-CRRx
	Left to left	1769-CLLx

(1) Where x = 1 for 1 ft (305 mm) or 3 for 3.28 ft (1 m).

## 1769 End Caps

The final 1769 Compact I/O bank requires an end cap on the end without the expansion cable. The CompactLogix 5370 L2 controller comes with a right-end cap, so you do not need to order one separately.

- Right end cap, catalog number 1769-ECR
- Left end cap, catalog number 1769-ECL

## 1769 Wiring Systems

As an alternative to buying removable terminal blocks (RTBs) and connecting the wires yourself, you can buy a wiring system of:

- Interface modules (IFMs) that provide the output terminal blocks for digital I/O modules. Use the pre-wired cables that match the I/O module to the IFM.
- Analog interface modules (AIFMs) that provide the output terminal blocks for analog I/O modules. Use the pre-wired cables that match the I/O module to the AIFM.
- I/O module-ready cables. One end of the cable assembly is an RTB that plugs into the front of the I/O module. The other end has individually color-coded conductors that connect to a standard terminal block.

### Removable Terminal Kits

You can order removable terminal kits with the CompactLogix 5370 L1 and L2 controllers separately. The kits are used to connect wiring to the controllers. The following table describes the kits.

Cat. Nos.	Controllers Supported	Description
1769-RTB45	CompactLogix 5370 L1	<ul style="list-style-type: none"><li>• Four 10-pin connectors that are used to connect wiring to the embedded digital I/O module of the controller.</li><li>• One 5-pin connector that is used to connect an external 24V DC power source to the controller.</li></ul>
1769-RTB40DIO	CompactLogix 5370 L2	Four 10-pin connectors that are used to connect wiring to the embedded digital I/O module of the controller.
1769-RTB40AI0	1769-L24ER-QBFC1B and 1769-L27ERM-QBFC1B	Four 10-pin connectors that are used to connect wiring to the embedded analog I/O module of the controller.

## CompactLogix Power Supplies

Select power supplies based on the controller and the number of additional I/O banks.

For a	Select
CompactLogix 5370 L3 controller	<ul style="list-style-type: none"><li>• One 1769 power supply for the controller and local I/O modules.</li><li>• One 1769 power supply for each additional bank of I/O modules.</li></ul>
CompactLogix 5370 L2 controller	No power supply as it is integrated to the controller package.
CompactLogix 5370 L1 controller	No power supply as it is integrated to the controller package.
CompactLogix 5380 controller	External power supplies to transfer MOD power and SA power to the system. The external power supplies are connected to a MOD power RTB and an SA power RTB that is installed on the controller.
